CSCB07- Group 3

Members: Amelie Breton, Deepika Chandrashekar, Zhuo Chen, Arno Peng, Enkai Zhang
Scrum Master: Amelie Breton
Product Owner: Deepika Chandrashekar

GitHub Link: https://github.com/Apqrsmd272/B07_Safety_Project
Jira Link: https://deepikachandrashekar85.atlassian.net/jira/software/projects/B07PROJ/boards/1/backlog

Video Link:

Requirements 1,2, 4-7: *(5 minutes 29 seconds)*
https://drive.google.com/file/d/1CIm29RBcnH04m5JncWREOcauF5rxrN3b/view?usp=sharing
Requirement 3: *(2 minutes 6 seconds)*
https://drive.google.com/file/d/1xJIusWQ4513takAsqYvZpDMn8DKGUDxF/view?usp=sharing

Note: I wasn't able to add it into the video, but here is the coverage from our test cases for reference:

login	33% (1/3)	17% (3/17)	36% (25/...	57% (15/...
LoginContract	100% (0...	100% (0/0)	100% (0/0)	100% (0/0)
LoginPresenter	100% (1/1)	100% (3/3)	100% (25...	100% (15/...
PinManager	100% (0...	100% (0/0)	100% (0/0)	100% (0/0)
SignInActivity	0% (0/2)	0% (0/14)	0% (0/43)	0% (0/11)

Main Tasks Done by Each Group Member:

- **Amelie Breton**
  - Assigned Project Requirements:
    - Emergency Exit Button (Requirement 2)
      - feature/emergButton
    - Support Connection (Requirement 6)
      - feature/emergButton
  - Additional Work:
    - Designed the base layout for the application in Figma and created the color scheme used in the application
    - Designed and imported hand-drawn icons for the home page and the navigation bar
    - Completed the demo video as well as the deliverable document (this document)
- **Deepika Chandrashekar**
  - Assigned Project Requirement:
    - Storage of Emergency Info (Requirement 4)
      - feature/data-page

    - <u>Additional Work:</u>
        - Completely refactored the login module, added in all the test cases.
            - test/login-module
        - Set up Jira
        - Set up Figma
- **Zhuo Chen**
    - <u>Assigned Project Requirement:</u>
        - Personalized Safety Plan Builder (Requirement 1)
            - feature/question
    - <u>Additional Work:</u>
        - Completed a significant amount of debugging and redesigning of UI in the application for better cohesiveness and improved user interactions
            - feature/UI
- **Arno Peng**
    - <u>Assigned Project Requirement:</u>
        - Reminders & Plan Review Notifications (Requirement 5)
            - feature/reminders
    - <u>Additional Work:</u>
        - Set up the project in GitHub and made the overall structure of the app
- **Enkai Zhang**
    - <u>Assigned Project Requirement:</u>
        - Secure Access Options (Requirement 3)
            - feature/auth
    - <u>Additional Work:</u>
        - Set up the Firebase database
        - Completed the video for Requirement 3

<u>Standup Meeting Summaries</u>

<u>Questions:</u>

1) "What have I completed since the last meeting?"
2) "What will I finish before the next meeting?"
3) "Are there any obstacles? If so, what are they?"

- **June 30** ----------
    - <u>Amelie</u>
        - I have set up android studio and the starter app.
        - I would like to set up the screens I plan to work on (the basic visual layout) and set up user stories.

        - I don't have much experience with Android Studio, but I plan on figuring out how it works on my own to ensure that it doesn't impact my work
    - Deepika
        - I have set up Android Studio.
        - I will set up my user stories
        - No obstacles.
    - Zhuo
        - Android studio set up, Starter code study
        - Currently working on user story
        - A bit confusing, but getting there
    - Arno
        - Finished setting up Android Studio
        - Gain more understanding of the starter code
        - Having trouble starting
    - Enkai
        - Have set up Android Studio
        - Understand completely what I should do.
        - N/A
- **July 2** ----------
    - Amelie
        - I have begun working on the visual layout for my assigned screens
        - I would like to continue to work on the visual layout and begin learning how to do the more technical parts of my components.
        - None
    - Deepika
        - I created my user stories for Sprint 1 and linked Android Studio to Github.
        - Have a design idea in mind and to start setting up cloud storage.
        - None
    - Zhuo
        - Not yet
        - N/A
        - N/A
    - Arno
        - N/A
        - Get started
        - N/A
    - Enkai
        - Reading resources regarding my task
        - Try to understand all of them

        - None
- **July 4** ----------
    - Amelie
        - Continue work on the visual layout for my assigned screens
        - I would like to continue work on the visual layout
        - None
    - Deepika
        - Created the figma account and shared with team members
        - Finish the design of the app
        - None
    - Zhuo
        - N/A
        - Getting started
    - Arno
        - N/A
        - Get Android Studio
        - None
    - Enkai
        - Still try to understand the meaning of lots of different android rules
        - Hope to figure out soon
        - None
- **July 7** ----------
    - Amelie
        - Still continuing work on the visual layout for my assigned screens
        - I would like to complete work on my visual layout and begin applying features
        - No obstacles
    - Deepika
        - Still working on finishing the design of pages on Figma.
        - Finish the design of the app.
        - No obstacles
    - Zhuo
        - Focusing mainly on backend side, Json File complete, Buttons complete
        - Working on using Json into the code
        - Have some trouble with visualizing
    - Arno
        - Created some classes, but unsure how to work them out
        - Create pages and buttons
        - No idea so far

    - Enkai
        - Develop some ideas on how to handle tasks
        - Do some practical work
        - Not yet
- **July 9** ----------
    - Amelie
        - I have completed the visual layout of the application, which we can use as reference for when we're building the application, and begun applying features.
        - I would like to continue applying my assigned features onto the visual components.
        - No obstacles
    - Deepika
        - I started familiarizing myself with the basics of Android Studio.
        - To start implementing my page.
        - None
    - Zhuo
        - Question display class
        - Differencing single answer with multiple
        - Have trouble dealing with firebase
    - Arno
        - Understood the fragments and activities and created the first page
        - Make pages and buttons that go to another page
        - Reading the codes
    - Enkai
        - Created buttons for login.
        - Do some practical work
        - Understanding some unfamiliar codes.
- **July 11** ----------
    - Amelie
        - I reorganized goals for our sprints, and continued work on learning how to implement my assigned portion of our application
        - I will continue to work on learning how to implement my portion, and I will complete the research for the resources for the support resources page
        - I think we might need more structure and planning, as well as stronger communication...
    - Deepika
        - I listed and planned the features I need to implement for my page, updated my figma layout, added story points to my jira tasks.
        - To start implementing the layout of my page on Android Studio.
        - I need to wait for the firebase login.

- Zhuo
    - Implementing text related class
    - Still on recycling view
    - None
- Arno
    - I created the app structure, buttons and activities and uploaded to GitHub master branch
    - Work on the notification page and wait for someone to set up the database.
    - I think we need more communication.
- Enkai
    - Finally figure out some methods in android and try to implement the basic firebase login.
    - Start implementing some required classes.
    - None

- **July 14** ----------
    - Amelie
        - I completed the research needed for my page and began working on creating the JSON file
        - I would like to continue on creating the JSON file and begin implementing my assigned features
        - Also waiting for firebase
    - Deepika
        - Finished the basics of my page including making lists, scrolling, editing items (add, delete, change) and made a PR request to merge to main.
        - To fix the UI and implement the firebase storage.
        - I need to wait for the firebase login.
    - Zhuo
        - Created different question items for adapter
        - fixing the xml for recyclerview, studying about adapter
        - facing tests, slow work
    - Arno
        - i: I did a recycler view and did a + button for lists of reminders
        - Finish the delete and edit buttons
        - Waiting for firebase and I am leaving Canada, the time zone might be a problem for me
    - Enkai
        - Refine login page layout and enable firebase login
        - Complete pin setup.
        - None

- **July 16** ----------
    - Amelie
        - Continued on creating the JSON file and began implementing my assigned features
        - Continued on creating the JSON file and continued with implementing my assigned features
        - I'm a little swarmed with midterms...
    - Deepika
        - Studied how to implement firebase into my part.
        - To fix the UI and implement the firebase storage.
        - no obstacles
    - Zhuo
        - Finished a single adapter about single choice.
        - Going to make the adapter useable for different items of questions
        - Need some review on mid terms
    - Arno
        - Added edit and delete buttons
        - Try to put them in the firebase
        - Having trouble with the internet
    - Enkai
        - Finish PIN setup, including functions and layout.
        - Trying to complete some parts of sign in.
        - No.
- **July 20** ----------
    - Amelie
        - I completed my layout on the app for the aid page and am researching how to exit the app into a new google tab.
        - Continuing with layout and implementation, and learning how to make my json file.
        - I don't know how to make the json file and connect to the database, and I'll need to learn how...
    - Deepika
        - In the process of implementing the firebase storage to my page.
        - Finish implementing the firebase.
        - no obstacles
    - Zhuo
        - just finished all my midterms, focusing on Proj now
        - questionnaire set up is finished for recyclerview, adapter and question, working on on click logistics for all questions
        - trouble on decrypting json file still

- Arno
    - N/A
    - N/A
    - N/A
- Enkai
    - Finish sign in functions and sign up functions and their corresponding layouts.
    - Finish PIN unlock.
    - Understanding codes that I need to use related to encrypted sharedPreferences and key-value.

- **July 23** ----------
    - Amelie
        - I adjusted the layout for the home page, made the floating buttons (part of the nav bar), created the json file for the cities and support resources
        - Continuing with layout and implementation, and learning how to use firebase as well as how to implement the emergency button
        - None
    - Deepika
        - Created the realtime database and finished implementing it onto my page. The data page can now store user information, any changes, and first checks if the user is authenticated before giving them access to the page. It updates everything automatically on firebase for the user's account.
        - Upload files (PDF/images) to Firebase Cloud Storage
        - To upload the files, I need firebase storage, but it's a paid plan. So now I have to figure out how to save the files locally.
    - Zhuo
        - Finished designing question generator logic, the quote can generate in proper route now, and finished all six question adapters and their xml files.
        - working on interacting with db, the tips page will be working soon, the UI of generator page needs more work
        - None
    - Arno
        - N/A
        - Trying to understand Firebase
        - N/A
    - Enkai
        - Finish PIN unlock, which includes PIN unlock functions and its xml layout and a class called “PinManage” to store, save and manage pins.
        - Add reset password at the sign in page.
        - N/A

- **July 25** ----------
  - Amelie
    - Continuing with layout and implementation of my screens and emergency button
    - Continuing with layout and implementation of my screens and emergency button
    - None
  - Deepika
    - Currently, I'm saving uploaded files locally on the device. Metadata (titles, timestamps) is stored in Firestore, and references (local file paths) are kept in the Realtime Database.
    - Fix the U
    - I need to make sure I can save files locally or not.
  - Zhuo
    - Fixed the ugly UI of the generator, now the generator is fresh and good looking.
    - Now the xml is kind of twisted, tidied the xmls of Question, made the generator now scroll correctly in one dimension.
    - Will work on real time db next move
  - Arno
    - Refactored my classes so they look clean
    - Firebase
    - N/A
  - Enkai
    - Finish adding the reset password function.
    - Adding the google login methods to it, as told by TA.
    - Understanding codes related to the google flow.
- **July 27** ----------
  - Amelie
    - I created the app logo as well as an additional logo for the login page
    - Continuing with layout and implementation, and learning how to use firebase as well as how to implement the emergency button
    - I accidentally deleted a significant chunk of my work because I failed to pull from the master branch correctly, so I am now redoing my part
  - Deepika
    - Finished the final touches of my part.
    - work on the testing
    - None
  - Zhuo
    - Finished Generator!!!!! Including interact with DataBase, adding submit button and corrected two UI mistakes (the flash of answers)
    - The tips are relatively easy, and should be done in 2 days.

        - No obstacles at all now.
    - Arno
        - started some Firebase codes like adding stuff into it
        - Finished editing and deleting the reminders into real-time firebase
        - N/A
    - Enkai
        - Finish some parts of the google login
        - Finish the google login.
        - It is weird that the new, non-deprecation google login method only supports the user to login with their existing google account.
- **August 1** ----------
    - Amelie
        - I completed the emergency exit button and finished a strong base for the aid page (it can generate a description based on the user's city, but it's just one massive scrollable textblock)
        - Will hopefully be done with the full implementation of the application so testing is done ASAP
        - I think the support page would be more effective and visually pleasing if the source name was in a separate box from its links, so I'm going to have to rework the source list to likely use recyclerViews (similar to the plan generating page)
    - Deepika
        - Finished the final touches of my part.
        - work on the testing
        - n/A
    - Zhuo
        - Fixed multiple UI errors in Home Page, changed generator and plan's UI into the same routine with home page, fixed a bug in plan builder, which shows wrong abuse type with answer and cause program error, changed the submit and edit logic of questionnaire, merged generator into Plan builder, no longer needed Icon for generator
        - Now I have trouble with the Navi bar. Need to fix it on other pages than home page
        - Fixing navigation bar
    - Arno
        - I finished Firebase with the Reminders activity and created the RecyclerView on the notification activity that shares the same Firebase data as the Reminders page. I also created the 3-light logic for my reminders. When tapped on, it flashes different lights corresponding to the time with the center control.
        - Start interacting with the plans and refactor my class so it looks clean and readable
        - I need to talk to the 'plan' person

- Enkai
    - Finish the google login by using the combination of credential manager and fallback google sign-in API, and suppress the warning "deprecation".
    - Trying to refactor the login page.
    - N/A
- **August 4** ----------
    - Amelie
    - Completed my portion of the application
    - Need to complete documentation for my files
    - I have family visiting and several assignments due on August 7th (but B07 is the current priority)
    - Deepika
    - Refactored the login module and created JUnit tests. I also finished adding code documentation for the classes I created.
    - finish up and submit the app.
    - None
    - Zhuo
    - Fixed UI for Data page, suited it toward other themes.
    - Since I finished my part, I'm being motivative and helping others about their UI
    - None
    - Arno
    - Finished reminders & notifications
    - Do testing
    - A lot of Finals are coming
    - Enkai
    - Recolor all the views to make it suits the UI style and refactor the login page.
    - Refine the pages.
    - N/A
- **August 6** ----------
    - Amelie
    - Completed documentation
    - Need to double-check work and create this document and the video for the submission
    - None
    - Deepika
    - Checked my code.
    - Need to double check everything and submit
    - n/A

- Zhuo
    - Fixed UI of Reminder, Notification and Support page, redirected Support towards plan generator if no plans generated yet, all UI are now in the same Tree-Like theme.
    - N/A
    - None
- Arno
    - Do documentation
    - Double check my codes
    - N/A
- Enkai
    - Add some little stuff to make pages look better.
    - Check if there's something wrong.
    - N/A
